GEOL SCI 20
The (geo)Science of Environmental (in)Justice

Monday & Wednesday | Bldg 320, Rm 241 | 9:45-11:15 am

Dr. Jane Willenbring, Associate Professor, Geological Sciences

Interested in science and applying those concepts to help humans? Interested in EJ topics and want to learn some relevant geoscience?

The (geo)Science of Environmental (in)Justice is an introductory-level, interactive course in which environmental justice case studies in the United States are impetus for learning Earth science concepts. We will focus on the topics of mining, soils, groundwater, contaminant transport, flooding, sea level rise, climate change, and air pollution—all at an accessible, introductory level.

*This class has an optional community engagement opportunity.*
